

Interventions in Wild Animal Health

The Zoological Society of London (ZSL), The Wildlife Institute of India (WII) and The University of Edinburgh (UoE) have been motivated to run this course in recognition of the need to conserve globally important biodiversity in South Asia and other biodiverse areas, which are a hotspot for wildlife diseases and conflict. These wildlife diseases are relatively unstudied and unchecked. ZSL, WII and UoE recognise an important need for additional expertise and greater numbers of wildlife health professionals to tackle this issue.

**Enrol now
for 2017**

As an integral component of the MVetSci Conservation Medicine, ZSL, WII and UoE have developed the practical 3-week field course 'Interventions in Wildlife Health' based in India to help provide support to South Asian Veterinarians and others. The course provides practical understanding to complement theoretical knowledge gained throughout the online Conservation Medicine Cert/Dip MVetSci programme.

This field course runs in the second year of the MVetSci. To be eligible for the 2017 course candidates must have enrolled on the Conservation Medicine programme by September 2015.

- **Work with experts in the field**
- **Apply theoretical skills in a practical environment**
- **Gain hands on experience working for wildlife**
